

Project Initialization and Planning Phase

Date	28 August 2026
Team ID	_____
Project Title	AI Adoption and Impact in Global Education
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

Project Overview	
Objective	To analyze global AI adoption in education and develop interactive Tableau dashboards that reveal adoption trends, regional and demographic differences, AI tool usage, infrastructure factors, and policy environments to support data-driven decisions.
Scope	The project covers analysis of student and teacher AI usage, school adoption rates, daily AI usage time, internet penetration, education index, government AI policies, AI tools, and country/region/demographic differences. The scope includes data cleaning, transformation, exploratory analysis, Tableau visualization, dashboard development, validation, and presentation of findings. It does not include developing or deploying new AI educational software.
Problem Statement	
Description	The rapid adoption of AI in education has increased usage among students, teachers, and institutions, but there is limited clarity about how AI is being used, how evenly it is distributed, and what impact it may have across regions and demographics. Differences in infrastructure, policy environments, adoption levels, and usage patterns make it difficult for stakeholders to identify gaps and make informed decisions.
Impact	Without clear data-driven insights, unequal access between regions and demographics, differences in digital infrastructure, and inconsistent AI adoption may remain difficult to identify. Solving this problem can help education stakeholders understand adoption gaps, compare regions, evaluate policy environments, identify market opportunities, and support more equitable and effective AI integration.
Proposed Solution	
Approach	1. Collect and inspect the project dataset. 2. Clean missing, duplicate, inconsistent, and incorrectly formatted records. 3. Transform and standardize relevant fields for analysis. 4. Perform exploratory analysis of adoption, usage, infrastructure, policy, and demographic factors. 5. Build interactive Tableau dashboards with charts, comparisons, filters, and geographic views. 6. Validate calculations and visualizations against the prepared dataset. 7. Summarize key findings and recommendations for the identified stakeholders.
Key Features	• Interactive Tableau dashboards for global and regional AI adoption. • Country and region comparisons.

	• Student versus teacher AI adoption analysis. • AI tool usage and preference analysis. • Daily AI usage-time analysis. • Analysis of internet penetration and education index alongside adoption. • Government policy comparison. • Demographic and adoption-gap analysis. • Interactive filters for focused exploration. • Data-backed insights and recommendations.

Resource Requirements

Resource Type	Description	Specification/Allocation
Laptop/desktop capable of running Tableau Public/Desktop and data-processing tools.		
	Memory	Recommended 8 GB RAM or higher.
	Storage	Sufficient local storage for the dataset, Tableau workbook, exported dashboards, and project documentation.
Software	Frameworks / Tools	Tableau Public or Tableau Desktop for interactive dashboard development.
Python with pandas and NumPy may be used for data cleaning and transformation where required.		
	Development Environment	Jupyter Notebook/VS Code for data preparation; Git/GitHub for version control and project files.
Data	Data Source, size, format	Project-provided Global AI in Education dataset containing student/teacher usage, school adoption, daily usage time, internet penetration, education index, government policy, AI tools, country/region, and demographic fields. Exact size and file format to be recorded from the final dataset.
